

Abstract

Cage (1) having a plurality of cutouts (2) for  
receiving rolling bodies (3) of a joint (4),  
5 characterized in that the entire cage (1) has a  
substantially uniform ductility. The invention also  
proposes a way of producing the cage (1), in which the  
cage (1) is fully hardened and tempered. Also described  
are particular application areas in the automotive  
10 sector.
